

Wounded Paw Attack Goat

Bass Fuzz

Add some grind to your bass. Dial in full-on fuzz or just a little grit while keeping a solid low end.

The old school fuzz section has a thick tone with more than a hint of octave up, uses germanium clipping and is tuned especially for bass guitar.

The TONE control goes from mid-range heavy to mid-cut with tons of bass and treble. The BLEND knob can keep as much or as little of the clean bass signal as desired to keep that solid low end or go for over the top distortion.

Input impedance: 70k Ω

Output impedance: <8k Ω depending on LEVEL setting

Current draw: 4mA

9V DC jack: The Attack Goat can be powered by a 9V battery or by a standard 9V power adaptor, such as the Boss PSA. The jack must have a center negative connection. To save battery life disconnect the patch cord in the IN jack, this also disconnects the battery.
